

Professional Summary

Software developer with strong expertise in Python and FastAPI, building robust and scalable backend systems. Actively exploring innovative technologies like blockchain, distributed systems, IoT, and AI, with hands-on experience applying them to practical solutions.

Technical Skills

- **Frameworks & Libraries:** FastAPI, SQLAlchemy, Django, Pydantic
- **Languages:** Python, C++, Kotlin
- **Database:** PostgreSQL, DuckDB, Redis, MongoDB
- **Tools:** Git, Airflow, DBT, Postman, Teamcity, Raspberry Pi, Arduino, JMeter, k6, Grafana & Prometheus
- **Cloud & Deployments:** AWS, Docker, Linux, Github Actions, MinIO, Kubernetes (Lens)

Work Experience

Software Engineer

Synthlane

September 2025 - Present

Noida

- Led performance engineering for a distributed stack (API gateway + ML services), scaling to **2000 RPS** at **p99 < 180 ms**.
- Built an **AI Voice Calling Platform** with **RBAC** for Real-Estate and Insurance **lead qualification**.
- Engineered a multi-provider **AI gateway** with **Celery** for long-running image/video tasks and centralized usage auditing.
- Built **VigilantX**, a government-focused malware detection and analysis platform combining multiple open-source cybersecurity tools.

Software Engineer

Kubik Labs

January 2025 - July 2025

Gurugram

- Optimized analytical workloads with **Parquet**, **Hive partitioning**, and **DuckDB**, achieving **40% faster query execution** on large datasets.
- Engineered **Airflow-based ETL pipelines** to ingest blockchain data **every 15 minutes**, achieving **near real-time accuracy**.
- Built **30+ REST APIs and WebSockets** powering **KubikScan**, to stream real-time and historical data across **4 Cosmos SDK blockchains**.

Backend Engineer Intern

Droidsze Technologies

July 2023 - November 2023

Remote

- Created **10+ CRUD APIs** for **Chargespot**, an **EV charger locator** application.
- Configured and customized the **Django Admin panel** to manage users, locations, chargers, and vehicles efficiently.
- Achieved **72% code coverage** for the backend by writing **unit and integration tests**.

Projects

Habito: An Image Detection based Habit Tracking App

GitHub Repository

- Engineered backend APIs for authentication, habit workflows, and leaderboards, including location-based rankings using **PostGIS**.
- Implemented an AI habit verification system with **vector embeddings**, streamlining automated photo validation.
- **Tech Stack:** FastAPI, PostgreSQL, Kotlin, Docker, BLIP image captioning, Sentence Transformer

Swassh Bot: Appointment Booking Whatsapp Chatbot

GitHub Repository

- Developed a chatbot with **WhatsApp Flows** and **webhook integration** for automated bookings, scheduling, and user interactions.
- Built a **Django admin panel** to manage bookings, customer data, and services for a local car wash.
- **Tech Stack:** WhatsApp Flows, Django, PostgreSQL, AWS

Education

Degree/Certificate	Institute/Board	CGPA/Percentage	Year
B.Tech, IT	Indian Institute of Information Technology, Una	8.3	2021–2025
Senior Secondary (XII)	ISC Board, St. Jude’s School, Dehradun	94.3%	2020
Secondary (X)	ICSE Board, St. Jude’s School, Dehradun	95.0%	2018

Achievements & Position of Responsibility

- Ranked 5th out of 65 teams, in **FrostHack 2023**, annual hackathon conducted by **IIT Mandi**
- First Runner up, in **Pro-go-thon 2022**, annual hackathon conducted by **IIIT Una**
- Open-source exposure through contributions to **MetaCall** and 3× **Hacktoberfest** participation.
- **Coding Profiles:** [LeetCode](#) , [GeeksforGeeks](#) , [CodeChef](#)
